

All-in-one, AI-powered clinical workflow suite for Indian hospitals

"From paperwork to AI-powered efficiency — the future of Indian healthcare starts here."

React 18

TypeScript

Supabase

Tailwind CSS

OpenAI

End-to-End Encryption

HIPAA-aligned

The Problem

- **Overwhelming administrative burden.** Paper / Excel-based work consumes 3+ hours daily per professional; ~50% of doctor time goes to paperwork instead of patient care.
- **Communication gaps.** Information silos across departments cause delayed referrals, missed follow-ups, duplicated effort and patient-safety risk.
- **Limited clinical context at the point of care.** Doctors manually piece together scattered records, leading to reactive rather than proactive care.

The Solution

MedSync360 unifies the clinical workflow into one encrypted, doctor-validated platform: digital **duty rostering**, end-to-end **referral & medication journeys**, a **one-click discharge summary**, private **1:1 chat**, and **analytics** — with AI features layered on a lightweight, progressive web app.

Live today WORKING

- **Duty management** — weekly/calendar roster, shift types, department-wise organisation, self-service swaps with notifications.
- **Streamlined referrals** — create with full patient detail, send/receive, status management (Received, Acknowledged, Closed, Cancelled), file attachments.
- **Medication journey & transfer chain** — complete, auditable history across every hop.
- **One-click discharge summary** — full diagnosis & medication history exported.
- **1:1 encrypted chat** — real-time messaging, presence, file sharing.
- **Analytics** — disease-pattern & referral-closure insights.

Planned (AI roadmap)

- **AI Medical Transcription** — ICD-10 coding with structured clinical notes; ~50% time saved, with confidence scoring.
- **AI Medical Assistant** — clinical decision support, case assessment & planning.
- **Research Insights** — curated healthcare news, drug innovation, case histories.
- **WhatsApp integration** — patient updates across the admission-to-discharge cycle.

Mission & Vision

Mission: deliver faster, smarter, and safer patient care using AI. **Vision:** grow MedSync360 into an AI "eco-system" across India that improves patient care and sets a model for national digital-health adoption.

Target Users

Medical institutions and private hospitals — **junior residents, consultants, and administrators.**

Market Size & Dynamics

Healthcare-communication market sits within a \$350B+ healthcare-IT industry. India target spans ~50 govt. medical colleges and 5,000+ professionals.

Business Model & Pricing

B2B SaaS subscription

- Institutional licenses (annual)
- Per-user pricing (monthly / annual)
- Enterprise (custom implementations)
- API & integration fees

Plans

Plan	Price / yr	Users
Basic	₹3 L	up to 50
Professional	₹6 L	up to 150
Enterprise	₹12 L	unlimited

Per-user: ₹750–1,250 / month depending on volume.

Competitive Advantage

Product	Business model
Faster — 90 days vs. 24-month enterprise rollouts	Doctor-validated — co-created with practising physicians
Cheaper — ₹12 L vs. ₹5–10 Cr enterprise solutions	Integrated — all features in one system vs. multiple vendors
Simpler — focused features, not overwhelming complexity	AI-first — built with AI at the core, lightweight web app

Global giants (Epic, Cerner: \$4–5B; Nuance, Abridge: US-focused AI transcription) are high-cost and slow to deploy. India players (e.g. Practo) are patient-focused, not institutional, with limited AI — leaving a clear gap.

Milestones

Achieved

- 3 months of doctor interviews & validation
- MVP with core features built; beta-tested with real doctors
- HIPAA-compliant architecture proven
- 5-member medical + technical team assembled

Next 6–36 months

- **6 mo:** full launch (private + govt.), 100+ active professionals, 95%+ AI accuracy
- **6–18 mo:** 10–15 colleges, ₹1 Cr ARR, team to 15+, hospital-chain partnerships
- **18–36 mo:** pan-India (50+ institutions), 2–3 state pilots, ₹10 Cr ARR

Intellectual Property

First-to-file advantage in India for multilingual medical AI; 4 patents planned (provisional in 2–3 months):

- AI-powered integrated healthcare communication & workflow management
- Code-switching medical transcription for mixed-language environments
- Lightweight AI documentation for resource-limited settings
- AI-driven staff scheduling with predictive workflow integration

Team & Advisory

Core team	Advisory board
Guru Hublikar — IT professional, 18+ yrs, start-up mentor	Dr. Nikhil V. K — Sr. Resident, Emergency Medicine, Fortis
Dr. Basalingappa R. M — PG, Preventive & Social Medicine, BMC	Dr. Manjunath Bannur — Emergency Physician, HCA Healthcare, Texas
Mr. Gururaj K — AI programmer, 14 yrs, start-up mentor	

Investment Ask

₹20 Lakhs (mentorship + funding) · 6 months · goal: validate the model with 3 paying colleges.

Allocation	Use
40% (₹8 L)	Product development & patent filing — OpenAI API, cloud, mobile app, integrations
30% (₹6 L)	Essential resources — UI/UX, DevOps, QA, medical consultant
20% (₹4 L)	Operations & infrastructure — legal/compliance, marketing, sales, office
10% (₹2 L)	Emergency fund, travel, miscellaneous
